

Find the definition you've been looking for.

Cel-lu-lite (sél'yə-līt', -lēt') *noun*. A fatty deposit causing a pocked, dimpled appearance, as around the thighs.

Key Laser Institute's constant research into cellulite treatments has resulted in one breakthrough treatment after another. Our firming and tightening treatment options include leading technology deep tissue radiofrequency treatments, and now our clinical trials with ACCENT®. We developed and refined the use of the Gentle YAG® laser, as a breakthrough in laser lifting and tightening. Don't hide your legs because of cellulite. Key Laser Institute can help you realize your potential for smooth, beautiful thighs and legs.

Fat (fāt) *noun*. A mixture of various soft, solid, or semisolid organic compounds occurring widely in organic tissue.

Excess fatty tissue can keep you from looking and feeling your best. Key Laser Institute can help you redefine yourself with leading-edge treatments like LipoSelection® to permanently remove fat. Or Laser Lipolysis, a breakthrough which both removes unwanted fat and tones skin by using vibrations of laser light. The right treatment program from Key Laser Institute can help you achieve the flat stomach, slender arms or firm thighs you'd been hoping to find at the gym.

Grav-i-ty (grāv'ī-tē) *noun*. The force of attraction by which terrestrial bodies tend to fall toward the center of the earth.

Sagging and looseness may result from a force of nature, but you don't have to live with them. Nor do you have to undergo painful surgery to shape them up. Non-invasive treatments such as Layered Light® and Thermal Layering® counteract the effects of aging by rebuilding and repairing collagen with laser light energy. Contour Threads™ restore support to facial structures with only a miniscule incision. And the Gentle YAG® laser, a breakthrough in laser lifting and tightening developed by Dr. Key, is now being adopted across the country. Let Key Laser Institute help you reverse gravity without surgery.

Dr. Douglas Key's tireless research has led to continuous breakthroughs in leading edge treatments to undo aging of the skin.
